

Glacial Lake Observatory

In this issue:

- ✓ Fieldwork – 2025 summary
- ✓ Data insights
- ✓ Outreach
- ✓ Publication highlights
- ✓ GLO team spotlight
- ✓ Keep in touch

Welcome to the inaugural newsletter of the **Glacial Lake Observatory (GLO)**.

These newsletters will share regular updates from the GLO project, including fieldwork highlights, research and data insights, outreach activities and more from our work to understand glacial lake dynamics across High Mountain Asia.

As glaciers disappear, glacial lakes are increasing in number and size. GLO combines satellite observations, field measurements, and modelling, to catalogue and monitor these lakes, quantify water storage, and improve understanding of associated flood hazards. Our aim is to provide open, science-based information that supports preparedness, risk reduction, and informed decision-making for mountain communities.
